NUMBER OF SEQ ID NOS: 5674
SEQ ID NO 3111
LENGTH: 203
             Sequence 3739, Application US/09134000C
Patent No. 6617156
GENERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
TITLE OF INVENTION: ENTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The present sequence represents a Mycobacterium tuberculosis protein. Products from the present invention, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosis of or vaccination against tuberculosis caused by M. tuberculosis, M.

africanum or M. bovis

New isolated mycobacteria polypeptides and nucleic acids - used developing products for the diagnosis of or vaccination against mycobacterial infections, particularly tuberculosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             10-NOV-1997;
05-JAN-1998;
01-APR-1998;
The invention describes a substantially pure immunogenic polypeptide fragment (I) from Mycobacterium tuberculosis that is able to evoke a protective immune response against infections by mycobacteria belonging to the tuberculosis complex. The invention provides a (I) fusion polypeptide comprising at least one polypeptide fragment (I) and at least one fusion partner; (2) a fusion polypeptide fragment comprising a T-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

                                                                                                                                                                                                                                                                                                                                                          $
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC epitope from M. tuberculosis protein ESAT-6, or MPT59 and a second CC different amino acid sequence from M. tuberculosis, and/or including a CC sequence which protects the first amino acid sequence from in vivo CC degradation or post-translational processing; (3) a nucleic acid fragment CC that encodes the above polypeptides. The polypeptides and nucleic acid care useful as pharmaceuticals, for diagnosis of and as antigens for CC vaccination against TB caused by Mycobacterium tuberculosis, africanum or CC povis. The polypeptides are also useful for diagnosing ongoing or CC previous sensitization in an animal with bacteria belonging to the CC tuberculosis complex. The invention also describes the use of CFP7A or CC response in a mammal; use of CFP7B, CFP19 or MPT59-ESAT6 or a T-cell epitope of for the in a mammal by performing a DTH type skin CC epitope of for diagnosis of TB in a mammal by performing a DTH type skin CC tuse of CFP27, CFP30A, CFP16, CFP19, CFP23, CFP23B, CFP79 or AT-CC cell epitope of for the preparation of an immunological composition; and CC for the preparation of a subunit vaccine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a substantially purified nucleic acid molecule encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a recombinant DNA construct for expression of a nitrite reductase gene in a plant cell, and a plant cell comprising the recombinant DNA construct. The nucleic acid is useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest. Sequences given in records for SEQ IDS 9692-16825 represent a group of 71314 Mayococcus xanthus proteins and peptides. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO

It allows direct manipulation of macrolides and related chemical structures by chemical engineering of the proteins involved in the biosynthesis of rosaramicin. It is useful to catalyse certain biochemical reactions, in vitro or in vivo, to direct or enhance the synthesis or modification of polyketide, polyketide substrate or its precursor. The present sequence is M. carbonacca polyketide synthase (PKS) type I protein. (Updated on 2-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1574 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to genes and proteins involved in the biosynth of macrolides by microorganisms. In particular it relates to the nuc acids forming the biosynthetic locus for rosaramicin (a 16-member macrolide antibiotic) from Micromonospora carbonacea. The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 13; Page 158-163; 206pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated polypeptide involved in biosynthesis of macrolides by microorganisms, useful for biosynthesis of macrolides by microorganisms, preferably for biosynthesis of rosaramicin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB;

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL1616-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB5737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            23-MAR-2000; 2000US-0191637P.

                                                               tuberculosis; fusion polypeptide; T-cell epitope; ESAT-6; MPT59; T pharmaceutical; vaccination; M. africanum; M. bovis; CFP7A; CFP30A CFP7B; CFP10A; CFP10A; CFP10A; CFP19; CFP23;
                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a Mycobacterium tuberculosis N-terminal peptide. Products from the present invention, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosis of or vaccination against tuberculosis caused by M. tuberculosis, M. africanum or M. bovis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated mycobacteria polypeptides and nucleic acids - used developing products for the diagnosis of or vaccination against mycobacterial infections, particularly tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;
                                                                                                                                 N-terminal sequence of antigen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a substantially pure immunogenic polypeptide CC fragment (I) from Mycobacterium tuberculosis that is able to evoke a CC protective immune response against infections by mycobacteria belonging CC to the tuberculosis complex. The invention provides a (I) fusion CC polypeptide comprising at least one polypeptide fragment (I) and at least CC one fusion partner; (2) a fusion polypeptide fragment comprising a T-cell CC epitope from M. tuberculosis protesin SAT-6, or MPTS9 and a second CC different amino acid sequence from M. tuberculosis, and/or including a CC sequence which protects the first amino acid sequence from in vivo CC degradation or post-translational processing; (3) a nucleic acid fragment CC that encodes the above polypeptides. The polypeptides and nucleic acid are useful as pharmaceuticals, for diagnosis of and as antigens for CC vaccination against TB caused by Mycobacterium tuberculosis, africanum or CC bovis. The polypeptides are also useful for diagnosing ongoing or CC creations sensitization in an animal with bacteria belonging to the CC tuberculosis complex. The invention also describes the use of CPP7A or CC provious sensitization in an animal with bacteria belonging to the CC tuberculosis of TB in a mammal by performing a DTH type skin CC test, use of CPP27, CPP30A, RDI-ORP2, RDI-ORP3, RDI-ORP5, MPTS9-ESAT6 or a T-cell epitope of for the proparation of an immunological composition; and CC cell epitope of for the preparation of an immunological composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition; and composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 755

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cc microbial source: The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a cc transformed plant taxing an improved property. The plant is a crop plant cc transformed plant having an improved property comprises transforming a plant with the recombinant DNA construct and growing the transforming plant with the cc recombinant DNA construct is useful for improving plant with the cc improved plant properties, e.g. improved cold, heat or drought tolerance, improved plant properties, e.g. improved cold, heat or drought tolerance, cc increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased resistance to plant disease, better growth rate of content, improved yield by modification of carbohydrate, nitrogen or cc phosphorus use and/or uptake, by modification of carbohydrate, nitrogen or cc phosphorus use and/or uptake, by modification of photosynthesis or by cc providing improved plant growth and development under at least one stress condition, improved plant production or improved galactomannan cc production. Note: The sequence expressed in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic forms after the sequence represents and the content of the printed specification but was obtained in electronic complete. The sequence can be content to the printed specification but was obtained in electronic complete.
